Let's get started!

Overview of Variables

Variables allow you to store and reuse values in your requests & scripts.

Variables in Postman

Key-value pairs

Dynamically change
request values

Uses of Variables

Reuse values

Avoid human errors

Avoid hardcoding values

Dynamic values in scripts

Common Types of Variables

Local Variables

Environment Variables

Global Variables

Overview of Environments

You use environments to group related sets of values together.

Need for Environments

Different values for
different environments

Control access to variable
values

Keep track of variables

The screenshot shows the Postman interface with the 'eCampusConnect' workspace selected. In the left sidebar, the 'Environments' tab is active, and 'eCampusConnect - Dev' is highlighted with a red box and a red circle labeled '1'. The main panel displays the 'eCampusConnect - Dev' environment variables table, which is also highlighted with a red box and a red circle labeled '2'. The table has columns for 'VARIABLE', 'INITIAL VALUE', and 'CURRENT VALUE'. It contains two variables: 'port' with value '14333' and 'baseUrl' with value 'http://localhost'. A red box and a red circle labeled '3' highlight the 'Save' button in the top right corner of the table.
